

NO SUBSTITUTE, PLEASE!

Any time you knucklebusters install the oil cooler turbine fan in your Cobra or Huey, focus in on the bleed air line reducer because it comes in 2 sizes.

A reducer that provides an increased air flow is used on the production AH-1S Model and AH-1G's modified to the "S" Model. Never use the increased flow reducer on other Cobra's and Huey's because the fan will overspeed and may tear apart.

The Cobra parts manuals are being corrected. Meanwhile, here's what you should ask for:

AH-1S; Modified "S" Model

Reducer, P/N AN919-23D, NSN 4730-00-187-3596

All UH-1's; All Other AH-1's

Reducer, P/N 204-060-494-1, NSN 4730-00-075-3715
