MURPHYMEC AT WORK...

HUEY HUB RUBBED

It seems this Huey Delta (UH-1D) Murphymec installed the pillow block oil reservoirs, P/N 204-010-191-1, on his bird and added the covers.

Filling the reservoirs with Mil-L-7808 oil is a bonafide built-in maintenance check, but when Murphymec added the amber stuff, not a drop got inside one of 'em! It was installed upside down, and Murph didn't notice his booboo, which could have caused the bird to come unglued while airborne, or dead-lined her just when she was needed for a Hueyvac mission.

Many aircraft parts are immune to Murphy's Law. And you have checks and by-the-book maintenance to help stamp out this pest. Use 'em.
