

PROTECT THE SHAFT

An ounce of prevention is worth a pound of cure.

One way to cut down on corrosion of a Huey (UH-1) main rotor shaft is to keep corrosion preventive compound handy.

Like, when you mount the two stabilizer bar dampers, be sure the splines

on the rotor shaft and on the damper are cleaned with dry-cleaning solvent, Spec P-D-680.

Then, coat the splines with corrosion preventive compound, Petrolatum (used hot) Spec MIL-C-11796 Class 3.

That'll do the trick.
