

For a Snug Fit

LEMME
DOWN...
PLEASE...

HALP!

Dear Windy.
We have play between the syn-
chronized elevator spar tube and the
horn on our Huey.
Are we allowed any play in this area?
SGT R. D. E.

Dear Sergeant R.D.E.,
Negative!

With wear and tear, plus routine
cleaning of the tube with methyl-
ethyl-keytone, you can get side play,
tho. This comes about when the solid
film lubricant wears off the tube.

The elevator should not be con-
demned, however.

Latch on to a 12-oz aerosol can of
Solid Film Lubricant, NSN 9150-00-
142-9309. Coat the tube with the lube.
Follow directions on the can.

You can apply a second coat, if
needed, after the first coat has dried to
a hard finish—about 10 minutes.

That'll give you a snug elevator.

THEY WERE
GONNA REPLACE MY
ELEVATORS... WHEN
ALL I NEED IS A
LITTLE SOLID FILM
LUBE!
