

Keep it

If your Huey has the new type of windshield, you don't want to scratch it right off the bat.

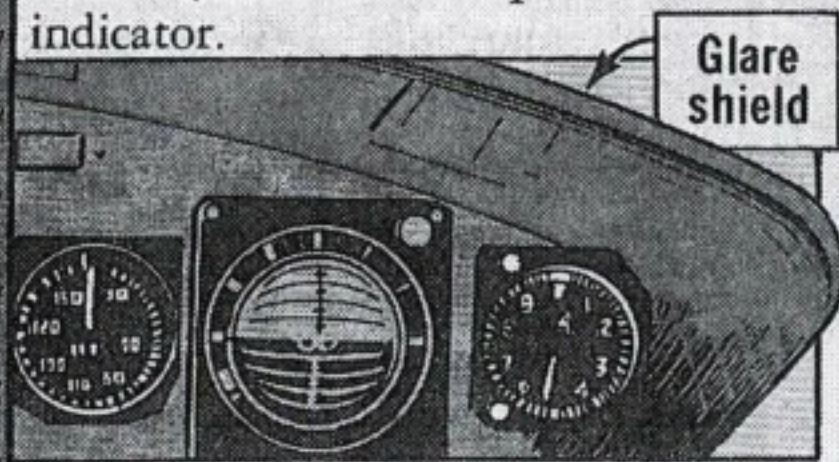

Prevent
chafing
on your
windshield

Chafing is what you'll get, tho, if there's no clearance between this new, thicker windshield and the glare shield.

Like New!

Focus in on the glare shield, bird mechs, just above the pilot's attitude indicator.

Glare
shield

If you don't have any clearance, adjust the glare shield turn-buckles...soonest!
